

Project Arch

From archives to you, accelerated by AI

Project Arch is an announced idea for a platform where students access scholar research and background data with AI-assisted help to build reading comprehension.

Designed for K12–14 learners—not a live product today.

Scholar Data
Students access research with AI help

Big Ten Focus
Initial concept scope

K12–14 Focus
Reading-level adaptive AI

CONCEPT SCOPE

The concept initially focuses on scholars from Big Ten universities. Big Ten is a registered trademark of the Big Ten Conference.

01
Students access scholar data

02
AI-assisted comprehension help

03
Personalized for each community

Platform Features

Nothing is live yet—this page and flyer describe the concept only.

1

Access to scholar research and background data from legendary legacy scholars at R1 universities.

3

Reading comprehension challenges powered by AI and designed to improve how students understand difficult material.

5

Student grade-level customization and explanation targeting to improve reading comprehension for K12–14 students.

7

Live and recorded podcasts with onboarded legacy scholars.

9

AI-generated perspective articles from legendary scholars commenting on ongoing topics in society.

2

Access to scholar research and background data from contemporary R1 researchers.

4

Veri AI model that answers student questions based on a scholar's research and background data.

6

AI-generated podcasts between scholars who share common knowledge at the intersection of their research.

8

Scholars who get onboarded from the roster would produce editorial content for the platform.

10

Everything designed around a student's reading level with AI used for good to support healthier, more effective comprehension and writing growth.

All features described above would be personalized for different learning communities and groups.

Our goal is to build a new American model for reading comprehension.

Scholar access
Students explore research and background data

AI assistance
Help with comprehension and learning
